

SEVENTH GEN EXTRACTS

Focus Hemp Co is proud to announce its merger with 7th Gen Farms, a hemp cultivator wholly owned by the Cow Creek Umpqua Tribe. Under this new relationship, both companies will be known as 7th Gen Extracts. Focus Hemp Co has been producing craft cannabinoid extracts in the Rogue Valley for almost 3 years. This merger brings a unique opportunity for both companies to provide a true soil to oil product to their customers.

7th Gen Farms has been a hemp cultivator in the Rogue Valley for 3 years. It is a sister company to K Bar Ranch in Central Point, OR. As a leader in Tribal hemp, 7th Gen Farms brings a holistic and sustainable approach to their farming practices. Being merged with Focus Hemp Co means they can continue that approach beyond the plant material and into the bulk oil and consumer product markets.

7th Gen Extracts (7th Gen Farms <-> Focus Hemp Co.) is honored to be able to provide true soil to oil tracking and transparency. Every batch of oil is backed with test results for our seed, pre-harvest, and post-harvest compliance as well as nationally compliant oil COA's.

Terminology

Full Spectrum Oil- Refers to a cannabis extract that contains the complete range of cannabinoids, terpenes, flavonoids, and fatty acids found in the plant. This oil still contains trace amounts of chlorophyll, lipids, fat and plant matter. This oil has been decarboxylated (activated) and is ready for consumer product formulation, amber in color and has an herbaceous smell.

Consistent test results include 70% CBD, 2.5% THC, 78% Total Cannabinoids.

THC Remediated Full Spectrum Oil- Refers to a cannabis extract that contains the complete range of cannabinoids with undetectable THC levels. Product still includes terpenes, flavonoids and fatty acids found in the plant. This oil still contains trace amounts of chlorophyll, lipids, fats and plant matter. This oil has been decarboxylated (activated) and is consumer product ready, amber in color.

Consistent test results include 60% CBD, LOQ-THC, 68% Total Cannabinoids.

Distillate- Refers to a potent cannabis concentrate that provides the complete range of cannabinoids but without any terpenes, flavonoids or fatty acids found in the plant. The oil does not contain any trace amounts of chlorophyll, lipids, fats or plant matter. CBD Distillate is very similar to honey in appearance and viscosity. It is generally a translucent amber color and has a viscous and runny, oil-like consistency when warmed but at room temperature tends to crystalize. Product is commonly taste and smell free.

Consistent test results include 83% CBD, 3.25%-THC, 92% Total Cannabinoids.

Broad Spectrum Distillate- Simply means additional steps have been taken to remove certain cannabinoids from the product. Usually, the THC is remediated to a compliant level (>.3%) but not totally removed. It is generally darker in color than non-remediated CBD distillate but has the same viscosity. Product is commonly taste and smell free.

Consistent test results include 80% CBD, .12%-THC, 86% Total Cannabinoids.
