Ulti filter

The ulti filter is a versatile tool used for micron filtration. It consists of a three inch diameter filter body and a lower sealing plate. Inside the filter housing is a replaceable filter element. The 100% polypropylene construction and viton o rings ensure wide solvent compatibility. Filter elements are available in 8 different pore sizes, making them compatible with a wide variety of tasks.

Micron filtration

Filter elements can be ordered in **0.2 , 0.45 , 1.0 , 3.0 , 5.0 , 10.0 , 25.0 , 50.0** micron pore size.

Thermally bonded caps and ultrasonic weld seams for a one piece 100% polypropylene construction.

Constructed in a cleanroom environment.

High surface area (5 inch elements 2.75 ft²) (10 inch elements 5.5 ft²)

Can be autoclaved 250f for 30 min, or sanitized with hot water at 180f for 60 min.

Free of surfactants, binders, resins and adhesives.

Gaskets can be special ordered in Buna, Viton, Teflon, silicone, Neoprene and EDPM.
