

### Product Information:

Media Bros inline flow controller (FC) replaces the need to monitor pressure and flow for in-line CRC applications. Designed for systems normally set up for powdered CRC media, the FC allows extraction systems operating 40-80psi to switch from powders to high flow granular media such as Media Bros CRX™ without the need to change the system setup. By controlling the solvate flow, the FC fitting helps reduce channeling in the CRC column and improves overall media effectiveness to produce great color. The flow controller is easily installed after (below) the CRC column. The FC is precision machined in-house to spec. flow rates based on hydrocarbon solvents. Built with stainless steel.

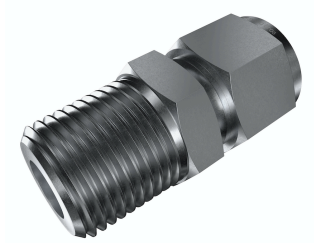

➔ Controls the solvated oil flow

➔ Reduces CRC media channeling

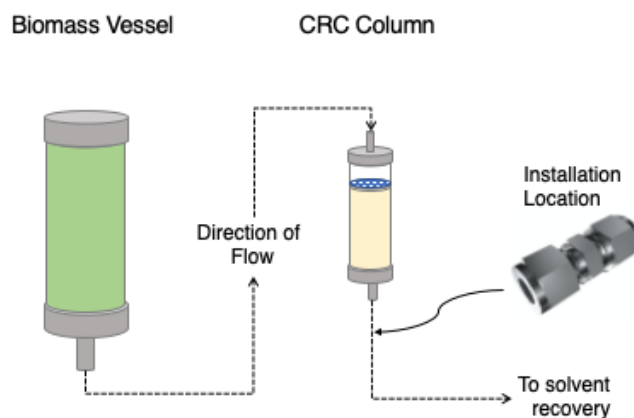

➔ Doesn't Impact Operational Work Flow

Offering	Fitting Type	Price*
FC4080-1	½ NPT to ½ NPT	\$275.00
FC4080-2	½ NPT to ½ TUBE	\$250.00
FC4080-3	½ TUBE to ½ TUBE	\$225.00

### Optional Fittings

### Installation Location

**ATTENTION!** Please read all safety manuals and follow proper installation guidelines.
