

The Wand

Dabbing Without Fire

Welcome to the dabbing revolution. Our sleek portable eNail dab kit includes the first ever eNail to use induction heating. It gives you the power to select your desired temperature for the perfect dabbing experience every time.

With The Wand, you're in control.

The Wand combined with our Borosilicate glass bangers create a safe and easy dabbing experience by eliminating the need for a torch along with the wires and coils found with other eNails. By using borosilicate glass bangers with an induction heating method, The Wand is able to precisely heat the banger to your desired temperature. Once it is at the perfect dabbing temperature place the concentrate in one of our borosilicate glass bangers and take the perfect hit.

Product Features

- Induction Heating
- Quartz Banger Cups
- Battery
- Viscosity Ranges
- Temperature Settings
- Safety Features
- Compatibility

Induction Heating Patented Technology

Dabbing Without Fire

What makes this heating method so unique? In most common heating methods, a torch or open flame is applied directly to the part to be heated. With induction heating, heat is “induced” within the part itself by circulating electrical currents. Since heat is transferred the part never comes into direct contact with any flame or contaminant, the inductor itself does not get hot and there is no product contamination. When properly set up, the process becomes very repeatable, controllable, clean and safe.

Borosilicate Glass Banger Cups

Ispire Patent Pending

Our Borosilicate Glass Banger cups have ferrous metal encased in between two sealed walls of Quartz completely sealed away from the dabbing environment and creating an absolutely clean and sealed Quartz Banger cup.

Induction Area

Battery Cell (2*18650 battery)

Charging Port (Type-C)

Dual battery 18650 cell

USB Charging Available

The Wand induction device uses replaceable dual 18650 battery to power the super high heating efficiency with minimal combustion. Moreover, external batteries ensure extended usage for a worry-free experience. Rechargeable via USB port – fast charging, the Wand device can reach up to 5 Volts with a maximum charging current of 2 Amps.

All Viscosity 18650 cell

Wax and Concentrates

Versatile enough to support wax and concentrates of any viscosity to meet your daily preference

Precise Temperature settings

Auto and Manual Mode Available

With accurate temperature control settings, it's easy to adjust temperature control settings for that perfect dabbing experience. The Wand also available in both Auto and Manual mode for more flexibility.

Power below 5%
Screen flashes 5 times

No battery
install the battery
Screen flashing 10s

Sensor error

Load current over16A

Safety Features Industry Standards

Built for convenience

Equipped with industry standards safety features to ensure top performance, durability, and prolong usage.

Cost-Effective Compatible accessories

Suitable for personal use

Super compatible with most bongs on the market, the wand comes accessorized with both angled and straight bangers. A cost-effective and safer alternative to the traditional oil rigs, it is compact and suitable for personal use.

Upgradeable Software

Temperature Range

450 to 800°F

Battery Capacity

External Dual 18650

Charging Current

5V – 2A

Liquid Temp Range

Optimal at 710°F

Charging Port

Micro USB / Type C Cable

Accessories

Borosilicate Glass Banger Cups

In the Box

The Wand Kit Box comes with

- The Wand Device x 1
- Charger Cable x 1
- Straight Banger x 1
- Angled Banger x 1
- Inner Cup x 1
- User Manual x 1

**External Battery not included
