CBG - 0.5%

CBN - 0.6-0.7%

CBC - 0.2-0.3%

CBDV - 0.2%

D-9-THC - 0.1%

Product description:

-Product may be crystalized due to high concentration of CBD and minor cannabinoids.

-Product can be warmed for ease of transfer from vessel and to aid in dissolution into diluents (i.e. MCT, VG, etc.). Heat entire container in an oven or water bath at 75-85°C (165-185°F) until fully melted and flowing oil consistency. Depending on storage temperature and size of packaging, this can take several hours.

-Use care to not heat above 95°C (200°F). This can cause a slight darkening of the product but will not affect cannabinoid concentrations.

-Store in cool dark location. For long term storage (>3 months) refrigerate or freeze product.

-Please consider recycling stainless steel containers for future credit. Contact your representative for details.
